

GREAT SECURITY MANAGEMENT GOES ALL THE WAY
SUPPLY CHAIN SECURITY SOLUTIONS

SUPPLY CHAIN SECURITY MANAGEMENT SYSTEMS (ISO 28000:2007)

DEMONSTRATE YOUR COMMITMENT TO PROTECT GLOBAL SUPPLY CHAIN

As global trade expands, so do the opportunities for criminal elements to infiltrate global supply chains. Over the past ten years, as the legal and regulatory environments have evolved, organisations have started to address the need for heightened security within global supply chains.

With regulations increasing, security threatened, and the need for the rapid exchange of information concerning the transport of goods from manufacturing through to the final point of sale, there has never been a better time than now to reinforce existing security systems or create new ones backed by effective risk and quality management principles.

What is ISO 28000:2007?

The ISO 28000:2007 standard specifies the requirements for a supply chain security management system, linking security management to many other aspects of business management. These aspects would include activities controlled or influenced by organizations that impact supply chain security, such as transportation of goods along the supply chain.

ISO 28000 certification applies to all organizations that would like to implement a security management system and integrate their security management into their overall quality management system such as small companies or large multinationals in the manufacturing, service, storage, or transportation sector.

Benefits of ISO 28000 Certification

An ISO 28000 certificate of compliance provides the following key benefits:

- Allows security to be managed as a process so that the effectiveness of security management can be measured and improved.
- Allows management to focus resources and efforts on areas with high-risk concerns (through security risk assessment).
- Allows management to benchmark its security management efforts with international standards.
- Demonstrates to stakeholders the commitment to enforce a systematic security management.

ISO 28000 uses a more pragmatic approach in which the risk levels of your supply chain operations are identified. It enables your organization to perform a risk assessment with supporting management tools (i.e. document controls, key performance indicators, internal audits and training) and applies the controls in accordance with the risk involved.

SGS offers a wide portfolio of solutions, including training, gap assessments, customized audits and certifications that can reinforce your security management systems and protect your brands and products as they make their way through international supply chains. SGS security auditors are fully equipped in helping you meet your supply chain security requirements.

WHY SGS?

SGS is the world's leading audit and certification body with over 100 000 organisations certified across a wide variety of industry segments. We are also the market leader in the field of transportation and supply chain security, having issued nearly 600 TAPA certificates, making us the global leader in TAPA certification.

Our reputation for technical expertise combined with our worldwide network of auditors, who operate as comfortably in English as they do in their local language, provides for an internationally consistent service across the world. In addition, our Global Key Account Management team oversees all activities, communications and technical interpretations and incorporates a standardised web-based reporting format, making execution faster and your job easier.

SGS is the world's leading inspection, verification, testing and certification company. Recognised as the global benchmark for quality and integrity, we employ over 55 000 people and operate a network of more than 1000 offices and laboratories around the world. We are constantly looking beyond customers' and society's expectations in order to deliver market leading services wherever they are needed.

Our approach is transparent and logical, which is what makes SGS the ideal independent partner to help you in your quest for continuous improvement. Our experts are selected and trained based on their technical expertise as well as their business acumen, and like all SGS employees their objectivity, ethics and confidentiality are beyond reproach.
