

2017 CROP QUALITY MAPS

INFORMATION YOU CAN TRUST

SGS delivers high quality crop data, following the harvest wave, collated and mapped by country and region, to give subscribers an accurate and up to date snapshot of grain quality before commodities reach transport hubs.

Each year SGS analyses thousands of samples of new crops to provide customers with a clear understanding of crop quality, including data relating to:

- Protein (%)
- Moisture (%)
- Falling number sec
- Foreign material (%)
- Test weight (kg/hl)
- Oil content (%)

In all locations, our experienced inspectors follow the harvests and take samples directly from farmers' locations/storage sites, thus giving subscribers information about quality per country or region.

KAZAKHSTAN, RUSSIA AND UKRAINE

Accessible 24/7, quality maps for Kazakhstan, Russia and Ukraine now form part our expanded Quality Monitoring database. In addition to the standard harvest quality data, this new service also delivers a range of export quality data.

EXAMPLE PROVIDED FOR WHEAT IN RUSSIA IN 2016

WHEAT PROBES BY CLASS

WHEAT GLUTEN INDEX CHART (%)

FRANCE AND GERMANY

Grains and oilseed harvest mapping (GOHM) monitors the harvest in real time. Using data provided directly by farming operators into an online database, or collected by our team, our interactive maps show crop qualities and their development.

With superior information on crop quality, traders and primary processing operators can plan their purchases before crops are ready to export or process.
